

WE'VE HAD OUR SCIENCE-BASED TARGET APPROVED

In April 2020 MVV has had its emissions reduction targets approved by the Science Based Targets initiative as consistent with levels required to meet the goals of the Paris Agreement. The targets covering greenhouse gas emissions from MVV's operations (scopes 1 and 2) are consistent with reductions required to keep warming to well-below 2°C. MVV's target for the emissions from its value chain (scope 3) meet the SBTi's criteria for ambitious value chain goals, meaning they are in line with current best practice.

SBTi-Target: Multinational German energy company MVV Energie AG commits to reduce absolute scope 1 and scope 2 GHG emissions 49% by 2030 from a 2018 base year. MVV Energie AG also commits to reduce absolute scope 3 GHG emissions 30% by 2030 from a 2018 base year.*

**The target boundary includes biogenic emissions and removals from bioenergy feedstocks.*

We report details on these and other carbon reduction targets, our current CO₂ balance as well as specific strategies and latest measures to achieve these targets in our annual report, our annual sustainability report and on our homepage.

About science based target initiative (SBTi):

SCIENCE
BASED
TARGETS

DRIVING AMBITIOUS CORPORATE CLIMATE ACTION

The Science Based Targets initiative champions science-based target setting as a powerful way of boosting companies' competitive advantage in the transition to the low-carbon economy.

It is a collaboration between CDP, the United Nations Global Compact (UNGC), World Resources Institute (WRI), and the World Wide Fund for Nature (WWF) and one of the We Mean Business Coalition commitments.
